# PRODUCT CATALOG

# Protect Column & Wall Edges

## INDUSTRIAL & BUILDING SAFETY PRODUCTS

The rubber compound makes a perfect protector of columns and corners because it is inexpensive and easy to maintain. The rubber will not warp, crack, chip or rot.

**Quick Installation** – Corner Protectors are installed using screws or epoxy adhesive (not supplied) onto concrete or steel columns. They are lightweight, easy to handle and can easily be installed by one person.

**Yellow Delineation** – Our Corner Protectors have yellow reflective strips making the corner and the protector clearly visible to motorists and pedestrians both day and night.

### All Size of Rubber Column Guard

Model No.	Shape	Length	Width	Thickness	Weight
NH-001	Arrow Shape	35" Approx	4"x4" Approx	10-12mm	2.6 Kg
NH-002	D. Shape	40" Approx	4"x4" Approx	10-12mm	2.8 Kg

You can order customize design or size.

# RUBBER DOCK FENDERS

Protecting Loading  
Dock Stations &  
Vehicles from Damage.

We offer a comprehensive range of moulded and extruded marine rubber fenders which are cost effective and efficient solutions to suit any operating environment, condition and requirement. The principle purpose of a rubber fender system is to protect the hull and berthing facility from damage when vessels berth alongside. The fender functions as a shock absorber by absorbing the berthing energy of a vessel on berthing facility.

- Standard Rubber Dock fenders
- Extra-length loading Rubber Dock fenders
- Extra-thick loading Rubber Dock fenders

# RUBBER WALL GUARDS

- Easy to Install
- Dimensional accuracy
- Yellow reflective strip
- One Piece Construction
- Durability

Prevent those little bumps from turning into big damage with a rubber wall guard. This simple addition absorbs and minimize damage when a heavy or light vehicle accidentally contacts a wall. The wall guard is resistant to water, oil, UV light, and extreme temperatures, so it can be used indoors or outdoors, in commercial or retail areas, parking structures, warehouse, industries or even a home garage.

- The wheel when set against the rubber chocks experiences the flexibility
- Unique capability of rubber chokes is possible due the equilateral round shape
- Distinct internal design of the product

# RUBBER INTERLOCKING FLOOR TILE Matt

- PLAIN SURFACE
- TEXTURED SURFACE
- THICKNESS 12 mm

Interlocking rubber flooring can be installed easily over nearly any smooth surface including concrete, asphalt, wood or tile. No special tools are required. The unique tab design holds the tiles together securely without the need of expensive adhesives, tapes or the labor to apply them

## Usage:

Gym, office, factories, hospitals, hotels, laboratories, laundries, bathroom, shops, supermarkets and skating rinks all have one thing in common – the need to provide a safe and comfortable medium for user. Interlocking rubber flooring can be installed easily over nearly any smooth surface including concrete, asphalt, wood or tile. No special tools are required. The unique tab design holds the tiles together securely without the need of expensive adhesives, tapes or the labor to apply them

- Good energy absorption.
- Reliable performance
- Durable standards
- Choose color options.
- Coin Texture mat non-slip surface.
- Floor protection.

# Bridge Expansion Rubber Joints

- Motorways
- Road Bridges

## DESCRIPTION

Rubber bridge expansion joints are mainly made of rubber, steel plate and angle iron. Steel plates are set in the rubber bridge expansion to strengthen the bearing capacity and they can slide freely along the angle iron to meet the expansion deformation of main grid.

Because of the excellent sealability and shock-absorbing effect of rubber, rubber bridge expansion joints do well in proofing water and reducing noise. The elasticity of rubber plates and its shear deformation in the telescopic channel helps the whole device to realize telescopic motion.

## Features

Rubber bridge expansion joints made of prime-quality rubber are anti-aging and have a long service life. Being wear-resistant, this product can withstand reiteration function of vehicle load. During installation, bolt holes on the bottom and each junction are filled with adhesion agent which makes the whole rubber bridge expansion joints be highly water-resistant.

Typical cross section through the fitted joint

# RUBBER LANE DIVIDER

Highest  
Visibility to the  
median during  
Night & Enhanced  
Safety of Motorists  
and Vehicle

Lane Dividers are designed to perform a wide variety of traffic management purposes like indicating lane separation, cycle lanes, parking bays, and tramways. They also mark traffic lanes in car park entrances and exit ramps and protect tunnel walls from possible vehicle impact damage. When used with optional reflective panels, they are ideal for low light areas such as underground passages.

# CONVEX MIRROR

**Convex Mirrors** used inside buildings: Large offices, stores, and hospitals use a convex mirror to let people see around the corner so that they can avoid running into each other and prevent any collision.

Convex mirror used in vehicles: Convex mirrors are commonly used as rear-view mirrors in case of automobiles and vehicles because it can diverge light beams and make virtual images.

Uses of the convex mirror in a magnifying glass: These mirrors are mostly used for making magnifying glasses. In industries, to construct a magnifying glass, two convex mirrors are placed back to back.

Convex mirrors used for security purposes: Diverging mirrors are also used for security purposes in many places. They are placed near ATMs so that bank customers can check if someone is behind them.

# Neoprene Bearing Pads

Rubber Bearing for Bridge and Construction

**B**lack neoprene bearing pad is used as economical efficient bearing plates for pre-cast, pre-stressed concrete or steel beams in bridges and buildings. Neoprene Pads permit a smooth and uniform transfer of load from the beam to the substructure, allow beam rotation at the bearing due to deflection of the beam under load. They further allow lateral and longitudinal movement of the beam caused by thermal forces.

Neoprene Pads have no moveable parts and thermal expansion and contraction are absorbed by the pad's ability to give and take in shear. There is no sliding between pad and beam or between pad and abutment.
